Communication

Chat over secure IM software

- Uninterrupted instant message communication via state of the art secure IM software.
Transfer files securely back and forth with no security problems.

Communicate over VOIP at no cost

- Call and speak with a programmer/designer in English with your comments, recommendations, or specifications.

Create tech support tickets

- Keeping track of new developments and changes to software can be hard, but with our ticketing system, one can easily manage progress. Create new tickets with a severity level to put more emphasis on more important issues.

Secure E-mail

- Communicate over E-Mail with a programmer/designer with your requirements or files. Our secure e-mail server software will maintain confidentiality to your important information.

Capabilities:

Web Design

- Focusing on latest web technologies. Member of the World Wide Web Consortium (W3C), which has a goal of developing interoperable technologies to lead the Web to its full potential

Software Development

- Develop customized application software covering the entire responsibility of performing the initial system study, design, development, implementation and training. The application software is totally customized to suit the clients' actual work requirements.
- We have commands on Application Development because we are using standard functions, routines, Dll's, Ocx's and much more in standard format. We follow standards for maintaining consistency in programming.
- Our suite of Application Development outsourcing service offerings include:
 1. Product Development
 2. Customized Development
 3. New Application Development

Benefits

- It all basically sums up to say that you will save money, which these days, a penny saved is a penny earned.
